## FEATURES AND BENEFITS

Sanazieg is a product consisting of hydraulic lime, botticino, kaolin, calcium caseinate, Vichy salt, tartaric acid, ammonium salts and natural fibres. It has high hygroscopicity and breathability, contains no cements, resins, solvents and radioemissive substances.

## FIELDS OF APPLICATION

Jointing and filling interstices between bricks, or between bricks and stones, in mouldings, and in decorative articles, etc., in interventions of restoration and rehabilitation of old buildings and buildings of historical interest.

## ALLOWED SUPPORTS

Bricks - Mixed walls (bricks and stones) - Stone walls

## PREPARATION OF SUPPORTS

Application surfaces should be clean, free of soiling, crumbling and non-adhering parts, dust, etc., conveniently saturated with water until they reach the condition "saturated with dry surface".

## MODE OF USE

Pour about 2/3 of the mixing water into the mixer. Gradually add Sanazieg and the water still required, continue to mix until a homogeneous, lump-free mixture of the desired consistency is obtained. The mixing water indicatively necessary is equal to 14%-16% by weight (3.5 - 4 litres per 25 kg bag). Apply with trowel, mechanical plastering machine, etc., in the interstices prepared as specified. To highlight the aggregate, use a sponge or a wet brush as soon as the plaster Sanazieg begins to harden. For more significant removals, spray retardant solutions like PRERIT, immediately after spreading.
