

Syntech Flexipur

Flexible two-component solvent-based polyurethane coating

Syntech Flexipur is a two-component aliphatic elastic polyurethane resin in the solvent phase, with excellent characteristics of chemical resistance and flexibility, ideal for the protective finish of both new and restored reinforced concrete structures. Syntech Flexipur is applied by roller or spray (airless) creating a film-forming coating with high protective capacity and resistance to cracking (crack bridging ability).

MODE OF USE

Mix the two components in their respective packaging. Then pour component B into the container of component A. Mix everything for 3-4 minutes using a low-speed mechanical stirrer until a homogeneous and lump-free mixture is obtained. Mix the dough again for a few minutes to mix the mixture. Apply the product within 60 minutes. Syntech Flexipur can be applied by roller or spray (airless). With manual roller application it is advisable to foresee 2 successive coats, spaced out by a minimum time of 5 hours (20 ° C and 65% R.H.). In the case of spray application (airless) it is possible to apply the recommended thickness of 200-300 dry microns in a single coat. The product must be applied at temperatures between +10 and + 35 ° C; optimal density and workability are obtained at a temperature of + 20 ° C.
